

12th February 2024

Dear Sir/ Madam,

RE: National Heavy Vehicle Regulator - Heavy Vehicle Safety Initiative

4ID Solutions is a leader in digital ID and asset tracking, playing a critical role in advancing asset management and operational efficiency. Our mission is to transform the tracking landscape through advanced RFID technology and custom solutions, ensuring seamless operation and maximum asset utilisation. We are committed to innovative solutions that enhance the value of assets while minimising waste and optimising the supply chain.

iQrenew is seeking grant funding to utilise existing technologies to demonstrate its effectiveness in reducing, and ultimately eliminating, instances of batteries being incorrectly disposed of in kerbside bins. This not only addresses a critical safety concern but also aligns with corporate social responsibility obligations and environmental protection goals.

The grant iQrenew is applying for will significantly boost their capacity to tackle the recycling challenges our society faces today. It will enable them to share and showcase this technology, that ultimately will contribute to a more sustainable waste and resource recovery sector. 4ID Solutions is excited about the prospect of enhancing our collaboration with iQrenew through this project, as it presents a valuable opportunity to merge our technological expertise with their recycling capabilities.

We are confident that iQrenew's project aligns with the objectives of the grant program and will make a substantial positive impact on waste reduction and resource recovery. Therefore, we wholeheartedly endorse their application and look forward to continuing our productive partnership.

Please do not hesitate to contact me should you require further information or wish to discuss this endorsement in more detail.

Sincerely,

W. Oldham
